

General Information – 4400 Series Power Paks

Accessories

Power Cord Kit

C22296A-20--12/3 Cord, 20A, Nema Plug 5-20P,
Dedicated Circuit Models—See above electrical
Specifications

Power Pak Racks

61790, 61790+1, 61790+2—All Models

Power Pak Wall Mounting Brackets

4408 For Models 4404 & 4410 only

Coolant Solution-63299-1

One gallon Perlick Coolant solution, 33% DowFrost
HD/67% Distilled Water

Coolant Connector Kit

63335—All Models

Leg Sets—All Models

57782....Set of four, 5 ³/₄ "–7 ¹/₂ " adjustable legs

Pump Kits

4430—Pump kit, 115V, 6.1 A, 100 gph, 150 psig
Models 4410, 4410W

4431—Pump Kit, 115V, 5.6 A, 100 gph, 150 psig
Models 4414, 4414W

4432—Pump Kit, 230V, 2.8 A, 100 gph, 150 psig
Models 4414-230, 4420

BLM2000 Receptacle Kit

4435—BLM200 Receptacle Kit—Single Receptacle All
Models

Product Description

Power Paks have always been an integral part of a Perlick Century Beer System. The 4400 Series Power Pak product line has been expanded to satisfy longer beer runs. A Power Pak circulates coolant solution (food grade propylene glycol with distilled water) from the walk-in cooler to the dispensing station(s) and back, maintaining the desired dispensing temperature at the faucet. The 4400 Series Power Paks incorporate a 1/3 hp ball bearing, maintenance free motor with a 100 gallon per hour 150 psig positive displacement pump for optimum performance. The 4400 series Power Pak product line employs a direct expansion form of refrigeration increasing the units' efficiency as well as making the units more compact. These units also employ an electronic temperature control with digital readout. This state of the art control controls the performance of the unit as well as giving the user a visual indication of the how the unit is working as well as early indication if something may be going wrong through the use of internal alarms.
